**DIRECTIONS FOR USE**

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of pesticide application.
- Read the “Limitation of Warranty and Liability” in the label booklet for DIREX 4L before using.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.
- The complete DIRECTIONS FOR USE can be found on the currently registered EPA Stamped Label.

**SHORTENED PRE-PLANT INTERVAL FOR COTTON**

Apply Direx 4L at 0.5 to 1.0 quarts per acre. If strip tillage has been done prior to the application, wait 7 days after application before planting. If strip tillage has been done after the application but before planting, no plant back interval is required. Refer to the table below for use rates in preplant applications.

**Direx 4L Alone**

<b>Soil Texture</b>	<b>Rate/Acre</b>
Loamy Sand (Louisiana only)	0.5 quart
Sandy Loam, Loam, Silt Loam, Silt	0.8 quart
Sandy Clay Loam, Clay Loam, Silty Clay Loam, Sandy Clay	1.0 quart
Silty Clay, Clay	1.0 quart

Do not apply Direx 4L in a preemergence application if it has been used in a preplant burndown application with this shortened plant back interval. Do not exceed suggested use rates for individual soil textures shown in the table below. If less than the maximum rate of application for a given soil is applied preplant, subsequent preemergence applications of Direx 4L may be made. However, the total combined application rate for Direx 4L applied preplant and preemergence may not exceed the maximum suggested use rate for either application method.
